

We replant

Oregon law requires forest landowners to plant trees after harvesting timber. This means we'll always have flourishing forests.

For forest products companies, it's not just about following the law. Replanting ensures a continued supply of logs for making wood products as well as habitat for a variety of animals, and creates a beautiful mosaic landscape.

Every year, 40 million young trees are planted in Oregon's forests. And far more trees are planted than are harvested.

Now, that's a good reason to be Forest Proud.

Nurturing success

Grow

Oregon nurseries grow millions of native tree seedlings, and care for these young trees until they're ready for planting in the forest.

Plant

Crews of workers plant trees in Oregon's forests while the seedlings are dormant in fall, winter and early spring. This takes advantage of cool, wet weather that promotes good root development.

Nurture

Foresters care for seedlings after planting. They make sure the trees are healthy and aren't overtaken by weeds, grass and brush. From there, the seedlings can grow into a future forest.

Be proud

Learn more at OregonForests.org/ForestProud, or join the Forest Proud community at Facebook.com/ForestProudOregon.

From left: Tree seedlings are grown in nurseries before planting in the forest. Crews of forest workers plant each seedling by hand. Seedlings are cared for after they're planted.

Forest Proud is brought to you by your employer in partnership with the Oregon Forest Resources Institute.
